

Project Update

Anna Feuer & Julie Jameson-Clausen

Progress

- Explored obsidian bases, *how to visualize data?*
- Narrowed design space to Boston application, *what do we want to see?*
- Updated wiki organization with design process in mind
 - Designs and parameters wiki pages with searchable metadata
- Continued to upload new sources (~ 60)
- Reached minimum utility goals
 - Converts pdfs correctly, consistently (> 90%)
 - Produces properly-formatted, useful wiki pages
 - Helps us learn
- Started learning Zoo Design Studio + zookeeper

Questions

- Optimizing wiki structure
 - Metadata consistency, accuracy, and completeness
 - Quantitative vs qualitative

Next Steps

- Define design goal
- Start design work
 - Utilize wiki to guide beginning of design process
 - Make and *use* bases
 - Cont. developing wiki structure
- Learn zoo dev / zookeeper

Thoughts

- Optimistic about wiki utility for design purposes
 - new organization + bases knowledge
- Inconsistencies are frustrating (and time consuming), but less so
- No longer worried about the quality of info, now thinking about how to access the info we want
- Optimistic about zookeeper speeding up design process
 - KCL is pretty cool, point-and-click interface is tedious
